

PILOT OUTLINE

Try Way2Sol on one of your projects.

Together, we'll choose a completed project and compare the resulting proposal with your team's work. We'll help decide what to evaluate and which materials to prepare.

01 Choose a project together

Discuss your team's work and the product's capabilities. Agree the pilot scope and what we will compare.

02 Prepare the materials

Gather anonymized emails, documents and exports from the start of the project. Keep the final proposal for comparison.

03 Review the proposal

Your engineer assesses the architecture, calculations, customer questions and revisions needed. Compare engineering time.

04 Change one requirement

Check which calculations and proposal sections update and how long it takes to review the revised proposal.

What we'll learn

Where Way2Sol helps your team, what needs improvement and whether to expand the pilot.

Data handling and pricing are agreed before the pilot.
A file-based pilot does not require infrastructure access.
