

PRODUCT OVERVIEW

More projects move forward. The same engineering team.

Way2Sol helps integrators and service providers prepare technical proposals: from customer emails and documents to architecture options, calculations and solution components.

01	02	03	04
Materials	Requirements	Calculations	Proposal

01 Requirements and questions

Objectives, constraints and infrastructure details in one place. The team can see what still needs clarification.

02 Architecture options

Compare suitable approaches, their constraints and risks, including an upgrade to the current platform.

03 Resources and licenses

Calculations follow company rules. Engineers can review source parameters, references and assumptions.

04 A draft proposal

Components and a delivery plan ready for review. When requirements change, the team can see what needs updating.

**Prepared by Way2Sol.
Reviewed by your team.**

Presales leads the project. The architect approves the technical approach and complex design decisions.
